

Equivio Tab in Relativity

Enabling Seamless use of Equivio Inside Relativity

USE EQUIVIO FROM WITHIN RELATIVITY

kCura and Equivio have collaborated to fully integrate Equivio's functionality for grouping near-duplicates and email threads within Relativity. The Equivio functionality is accessed via a dedicated Equivio tab within the Relativity user interface.

Approved by kCura, the Equivio tab allows users to launch and manage Equivio processing without ever leaving the Relativity GUI. By rendering Relativity "Equivio-ready," this tight integration makes it quick and easy to implement Equivio. More importantly, it ensures the seamless use of Equivio's best-of-breed analytics as an integral part of the Relativity workflow.

STREAMLINED DATA FLOW

The integrated GUI and data flows make it easy for Relativity users to take full advantage of Equivio's near-duplicate and email thread groupings within the Relativity review environment. Unlike plug-in integrations that toggle between two applications, this core-level integration provides access to all Equivio functionality and data from within the Relativity environment, creating a straightforward, intuitive user experience.

The tight integration of the two technologies provides users with several key advantages:

- **Unified GUI** – With Equivio fully embedded within Relativity, the users can remain within the comfort zone of the Relativity “look and feel”, ensuring familiarity for the user while also minimizing the learning curve.
- **Seamless processing flow** – Equivio directly accesses and updates the Relativity database to create an efficient and seamless workflow that simplifies data handling, saves time and reduces the risk of errors.
- **Simple to implement** – Automated installation and tight integration ensure straightforward setup and implementation of the Equivio tab and functionality.

The integration is built using Relativity APIs. This future-proofs the integration, ensuring its compatibility as subsequent versions of the products are released. The integration is currently compatible with Relativity 6.10, 7.2 and 7.3. Further details are available on the [Relativity Ecosystem](#).

The image displays two screenshots of the Equivio Tab Demo in a web browser. The top screenshot shows the 'Equivio' dropdown menu with 'NearDuplicates/EmailThreads' selected. The bottom screenshot shows the 'NearDuplicates' configuration page with various settings and a 'Run' button.

BOTTOM LINE: SEAMLESS INTEGRATION, OUTSTANDING USER EXPERIENCE, FASTER REVIEW

The integration of the Equivio tab in Relativity enables reviewers to take advantage of Equivio's best-of-breed analytics technology as an integral part of the Relativity workflow. Approved by the kCura technical integration team, the Equivio tab enables an easy-to-use, integrated-platform solution for rapid-fire e-discovery processing and review.

ABOUT EQUIVIO

Equivio develops text analysis software for e-discovery. Users include the DoJ, the FTC, KPMG, Deloitte, plus hundreds of law firms and corporations. Equivio offers Zoom, an integrated web platform for analytics and predictive coding. Zoom organizes collections of documents in meaningful ways. So you can zoom right in and find out what's interesting, notable and unique. Request a demo at info@equivio.com or visit us at www.equivio.com.
